TALES *from* CEDAR RUN

Pleas for Bees Honeybees in Trouble

Photo by Luanne Weekes

Have you noticed? Honeybees have been in the news. A lot. People are talking about them, too. A lot. There are magazine articles, TV shows and documentaries that are highlighting this fascinating bug. Oh, and then there was *The Bee Movie!*

Why all this sudden attention to

an insect mostly ignored by the general public? Because like so much of the non-human population around us, they are in trouble, and this time people have to notice. Why? Because unlike some other wildlife, declining numbers of honeybees can drastically affect the human population, quickly and with alarming effect. As a society, we need honeybees. A lot.

Honeybees are very efficient pollinators, visiting 50 – 100 flowers on each trip from the hive, which can be as far as 6 miles in one direction. Here in the Pines, the blueberry and cranberry fields we're known for would produce fewer berries without an assist from honeybees. In fact, without honeybees there would be no almonds, avocados, squash, peach-

es – over 100 food crops depend on honeybees. Without their help the fruits and vegetables that we are accustomed to picking up at the supermarket would simply disappear, or be unaffordable.

There are a number of stressors for honeybees that include viruses, mite and beetle infestations, and fungi. New nicotine-based pesticides (intended for other insects but affecting the bees as well) and habitat loss are likely having an impact on the populations as well. Recently, the bees are just disappearing, entire hives failing without apparent cause. Referred to as 'colony collapse disorder,' this mystery needs to be solved quickly to keep hives strong and healthy.

So, what's happening?

(Continued on page 4)

Spare the (Golden) Rod

If you hear someone mention goldenrod as the culprit when discussing their allergies, please tell them that ragweed is really to blame. Goldenrod blooms at the same time as ragweed, but the way each one is pollinated makes a vast difference in whether those pollen grains are spread to allergy sufferers. Plants such as the goldenrod give off a heavy, sticky pollen that is carried primarily by insects.

Ragweed on the other hand has tiny pollen grains which are easily carried by the wind, and are easily inhaled by allergy sufferers. Studies have shown that ragweed pollen is found many miles out at sea. Of course, that is no comfort to hay fever sufferers who would wish that it all blew far from shore each fall.

There are well over a hundred species of goldenrod found in the United States. Howard Boyd lists nine of them found here in our area in his "Field Guide to the Pine Barrens of New Jersey". Their blooming season can begin as early

as July and continue into early October. The Latin name for goldenrod is *Solidago* which means "to make whole," evidence that throughout history it has had a reputation as a curative for various ills.

Most important to the goldenrod are its many pollinators including butterflies, bees and various other insects. Attracted by its glorious yellow color and sweet pollen, the Seaside Goldenrod hosts thousands of Monarch butterflies on their migration route in the fall. The seeds produced by goldenrod are often consumed by songbirds and some small mammals, only to be deposited elsewhere to start a new stand.

One very interesting insect that interacts with the goldenrod is the

goldenrod gall fly. The female will lay an egg in the plant's stem. The goldenrod then forms a gall, or leathery round ball, around the egg in order to protect itself from complete invasion. Nature's food chain will often come into play at this point. Some wasps will find their way inside the gall and lay eggs in the same small space. Not to be outdone, woodpeckers can blast their way into the gall and devour all of the contents.

Thought of as a weed by some, this native plant is actually a great candidate to add to a garden. It is hardy and will grow in most soils depending on the particular species. It acts as a host to beneficial insects and repels some pests as well.

All of this is of little consequence to the hay fever sufferer when ragweed season comes along. Fortunately though, knowledge of the goldenrod's innocence is spreading, making it easier for us all to continue to enjoy this lovely plant on our roadsides and in our yards.

Cedar Run Refuge

Mission

Woodford Cedar Run Wildlife Refuge protects the environment through wildlife rehabilitation, environmental education and habitat preservation.

A Day in the Life

As the Refuge grows, it sometimes seems that we all get caught up in the day-to-day work of the place, and forget to look at where we are, and where we're going. To help us, and to keep you up-to-date on the 'big picture', I thought it might be a good idea to write a quarterly overview for the newsletter.

I want to start off by saying thank you to all of our supporters. We really would not be able to help the wild animals or teach children about the environment without your help. The Refuge has come a long way in the last fifty years, and I am very proud to have played a part in it for the last six. We have a lot of work to do in the days ahead, but with all of the wonderful people who volunteer their time, talent and funding, we can look to the future and know our tasks can be accomplished.

Following is a snapshot, a day at the Refuge in mid-summer:

The rehabilitation hospital is bustling. There are babies everywhere, rabbits with their cute little noses and fluff of tail, dozens of ducklings happily splashing in the water, a couple of juvenile raccoons behaving like little acrobats, and what always looks like a thousand open mouths in the baby bird incubator, every one saying 'feed me'. They all get fed, day after day, thanks to our tireless staff and dedicated volunteers. And then there's all the cleaning associated with those mouths, the medical care, the paperwork, and the phone calls to be answered. Sounds exhausting, doesn't it? It is nearly overwhelming, but our staff and volunteers make it work.

As I write this there are about a dozen captivated faces staring into

the pond outside my window. The children in our 'Pond Paradise' summer camp are trying to spot frogs — and sort of hoping to catch a glimpse of the little snake that hangs out there. The education van which carries around our resident animals has just pulled in the driveway, our Education staff back from teaching pre-schoolers all about owls and turtles. There are visitors checking in at the desk, a little girl making a bumblebee out of a toilet paper tube and tissue paper on the porch, and a group of boys daring each other to be the first to stick their hand in a mystery box in the Great Room. Summertime is keeping our Naturalists very busy! Come the fall we will be present at many of the area festivals — if you're out at the Tuckerton Decoy Show or Batsto Country Living Fair stop by and say hello. We are also busy planning Autumn with the Animals in November, and our Photography Workshop is on the calendar for October. In September we will host the first Pinelands-Friendly Yard and Garden Fair, and our First Annual Teddy Bear Clinic.

If you've never been here, or if it's been a while, I want to encourage you to come and see what we have accomplished. The Refuge is an amazing place. Every day we help injured and orphaned wildlife, teach the importance of habitat conservation and environmental awareness, and show visitors how the world would be a duller place without the eagle and bluebird, the box turtle and even the squirrel. I am very happy to be the Executive Director of this organization and to be able to work with such marvelous people. So once again I say, for myself and for the Refuge, thank you.

Michael Ginder

Please remember we do not receive funds from Local, State or Federal governments.

We rely on YOUR donations to provide animal care and education programs for your community.

CONSIDER BECOMING A MEMBER!

Fall Photo Workshop

Photo by Ralph Alfors

John Orlich, a nature enthusiast and gifted wildlife photographer, is

conducting a photography workshop for us on October 18th. He will literally set the stage for some extraordinary photos that many photographers struggle all their lives for.

John will work with participants to get the exposure right, the focus perfect, and the shots framed for optimum impact, and he will share ideas for using various kinds of equipment. With the Pine Barrens flora in its full autumn splendor, John will also be able to comment on the best use of natural lighting for native plant photos.

The date, Saturday, October 18, (rain date Sunday, October 19) was specifically chosen to give the best chance for good weather and good

light. The Workshop will begin at 8:00 a.m. with a short introduction and overview of the day. We expect to wind up about 2:00 p.m. The last hour will be a free form 'shooting gallery' in the wildlife compound, allowing participants to get candid shots of some of the other residents.

The cost is \$95 per adult (no children please). Pre-registration is required by October 4th and space is limited so call early. Workshop attendees should meet at the Education Center at Woodford Cedar Run Wildlife Refuge, 4 Sawmill Road, in Medford. Pack a lunch and bring weather-appropriate clothing.

How Can I Help?

Our members are generally kind and caring people, and we often hear 'I wish I could do more.' Here are a few ways that you may be able to give more support without giving more cash.

TD Commerce (formerly Commerce Bank NA) is still offering their Affinity Program to its clients. All you need to do to participate is ask someone in Customer Service at any branch to designate you as part of the Woodford Cedar Run Wildlife Refuge Affinity Group. Nothing comes out of your account, but we benefit when the bank makes a contribution based on the average

combined account balance of all members of our Affinity Program..

Macy's Shop-for-a-Cause is a program that lets us offer our members "Shopping Passes" for discounts, special in-store events, entertainment and a chance for great prizes at all Macy's stores on September 20, 2008. The passes are \$5.00 each, and the saving potential enormous. Most items will have discounts of 20%, with 10% off on big-ticket items (a few exclusions apply). Call 856-983-9702, email info@cedarrun.org, or stop by to purchase your Pass before September 17th.

Many companies offer Matching Funds programs to support their

employees favorite charities, allowing you to increase your contribution to Cedar Run without taking more out of your pocket. Call your Community Affairs or Human Resources Department to find out if they have a program.

Do you like to build things? Are you good with children? Do you love animals? Do you knit, sew or like to do crafts? We can always use volunteers. Call Stephanie Stewart, our Rehabilitation Manager and Volunteer Coordinator, for more information. (A word of advice: it's still baby season, and Rehab is very busy. If you get the machine, leave a message. Someone will get back to you within 48 hours).

With Gratitude

We would like to publicly express our sincere gratitude to the following businesses and foundations that help with grants and donations throughout the year. We literally could not do our work without you:

Ahimsa Foundation
Bank of America
Bernice Barbour Foundation
Burpee Foundation
Catherine C. Reiley Foundation
Church & Dwight
Ellis Family Foundation
Holman Automotive
Natalie W. Furniss Charitable Trust
PHH Mortgage
PSE&G
Henry M. Rowan Family Foundation
SeaWorld Busch Gardens Conservation Fund
South Jersey Industries
Subaru of America Foundation

CATS INDOORS!
The Campaign for Safer Birds & Cats

**KEEPING CATS INDOORS ISN'T
JUST FOR THE BIRDS!**

Indoor cats are safer, healthier and live longer than free-roaming cats. Millions of outdoor cats kill hundreds of millions of birds and other wildlife in the U.S. each year. Protect cats, birds and other wildlife by keeping cats indoors!

FICTION: Honeybees were all over the food at our picnic!!

Plea for Bees (from page 1)

Let's start with a little-known fact: there are no wild honeybees in the United States. Honeybees were first brought to North America by English settlers when they populated the Virginia coastal area, and they maintained them in man-made hives to provide honey. So honeybees that live in dead trees and hollows are feral, not wild, just like house cats, and their offspring, living on their own are feral. And while they are not native, modern farming practices have made them essential to the New World.

One result is that beekeepers, until recently thought of as eccentrics who let stinging insects crawl all over them, are suddenly cool. Beekeepers

are important because most feral honeybee colonies don't survive their first season. The beekeeper plays a very active role in providing proper conditions for housing, and sometimes even medication to help cure or control disease or parasite infestations.

With fewer hives surviving countrywide, pollination services are suddenly in high demand. As the population of honeybees decreases, beekeepers are struggling to keep up with demand.

Suddenly beekeepers are a hot commodity. Successful hives are moved from one field to another, one region to another, following the flowering crops throughout the year. Local cranberry bogs may be pollinated by

bees recently arrived from Florida, or sometimes even farther away to the west.

In summary, honeybees are not particularly aggressive, seldom sting without tremendous provocation, live quiet lives, work hard, provide one of our sweetest treats, and help keep fruits and vegetables on our tables.

So next spring when you drive by the fields of blueberries or cranberry bogs, look at the rectangular hive boxes with gratitude. Those will be honeybees at work, playing an important role in providing food for your family. In fact, Rutgers offers a Short Course each year for prospective beekeepers: maybe you want to consider becoming a beekeeper yourself!

UPCOMING EVENT!

"Winter at the Refuge" GREETING CARD ART CONTEST

Kids!

Help us design our
**Woodford Cedar Run
Wildlife Refuge**
holiday card!

Starting September 1st children 5 through 15 can submit original artwork that we may select to use as holiday greeting cards. Look for guidelines in our e-newsletter or on our website starting in August.

To sign up for our e-newsletter, call our education center at 856-983-3329, ext 1 or send your request to info@cedarrun.org.

Teddy Bear Clinic

Sept 21, 2008
12:00 pm - 3:00 pm
at our Education Center
Free with regular admission

HEALTH CHECK FOR TEDDIES!

Bring your favorite stuffed friend to our make believe health clinic! "Doctors" and "nurses" will give your teddy a physical and check for broken bones. You'll learn how much your friend weighs and what his temperature is. Each teddy leaves with an x-ray, an examination chart, a certificate of health and, of course, a lollipop.

One of our special Wildlife Ambassadors will be on hand for viewing!

We CARE about your teddy BEAR!

FACT: Honeybees are not interested in 'people food'. It is wasps and hornets that are so annoying at your picnics!

Garden Update

The Toni Moore Memorial Butterfly Garden is finally underway. A group of environmental students recently helped with the planting of butterfly bushes in a sunny spot near Cedar Run's amphitheater. As if waiting for the first plant to touch the earth, a beautiful Monarch landed on a bloom as we watched. Perhaps it was guided by Toni's spirit.

Jeanne Woodford

Iryna Shcherba, a foreign exchange student from the Ukraine, organized a Bake Sale to benefit Woodford Cedar Run Wildlife Refuge while she was in the US. For 4 hours she and her friend Alina Jackson sold pies, cakes, cookies and bread in front of Bill's Wonderland of Pets in Somerdale, NJ, raising \$225 in the process. Our thanks to Iryna, Alina, and store owner Bill Chappell, for their kindness and support.

Jack McDade and Jay Lloyd of the Burlington County Institute of Technology (Medford Campus) have created ideally designed perches for our raptors. The sturdy bases provide stability, and the diameter of the steel helps insure that the birds feet stay strong and healthy.

2008 RELEASES

(April through June)

YOUR donations made the release of the following animals possible:

3 Red-tailed Hawks	1 Worm Eating Warbler
1 Cooper's Hawk	2 Common Grackles
3 Great-horned Owls	1 Nuthatch
1 Eastern Screech Owl	1 Mockingbird
52 Gray Squirrels	6 Killdeer
150 Eastern Cottontails	6 Carolina Wrens
4 Flying Squirrels	3 Starlings
1 Eastern Chipmunk	3 Blue Jays
7 Raccoons	3 American Crows
7 Opossums	2 Rock Pigeons
2 Groundhogs	7 House Finches
28 Mallards	1 Northern Flicker
2 Herring Gulls	2 Downy Woodpeckers
2 Laughing Gulls	1 Red-bellied Woodpecker
12 Canada Geese	21 House Sparrows
6 Mourning Doves	2 Black Racer Snakes
24 American Robins	1 Black Rat Snake
1 American Goldfinch	3 Painted Turtles

Gwen Sparkman, Jenna Graziani, Katie Vogel, and Alyssa Gold of the Shawnee Environmental Club present a check for \$100.00 to Michael Ginder and Terri Loy (with Squam). The Club raised the money for the Refuge by giving a yard sale.

Help!

We are in desperate need of old towels, sheets, or linens of any kind, and paper towels. If you have any you can donate, you can drop them at the Rehabilitation Hospital (6 Sawmill Road) from 9:00 a.m. to 5:00 p.m.

Thank you!!

DID YOU KNOW? A queen honeybee can lay 1,500 eggs in one day!

Photo by Luanne Weekes

Insect Control

The food chain is a simple concept, one that we teach children here all the time. At the bottom of the chain are plants. Moving up the chain are insects, fish, reptiles and amphibians, birds, mammals, and humans. Generally, species feed on species equal to or lower than their level on the food chain. It's the basis for the whole predator/prey relationship.

So what does that have to do with insect control? Well, here in the Pinelands, we have an estimated 10,000 species of insects. It doesn't take much imagination to figure out what would happen if they were all left to reproduce at will. Before long we would be buried in mosquitoes, deer flies, beetles and moths. Happily, we also have a lot of insectivores, all of them with big appetites, so the worst case scenario doesn't play out. But we owe a real debt of gratitude to the creatures we share the Pines with.

For instance, bats that spend time

in New Jersey live exclusively on insects. They can consume up to 400 insects an hour when they're really hungry (and lucky). Assuming a 6 hour night shift, allowing for a couple of breaks, that extrapolates to about 2000 insects per bat every day from spring through fall, or about 360,000 bugs per bat each year.

Birds do a good job, too. Purple Martins are well-known for their ability to haul in 500 mosquitoes an hour (actually, that number was determined in controlled conditions, and martins are daylight flyers, so probably eat more gnats and flies than mosquitoes, but their consumption rate is still impressive). Chimney Swifts are so dependent on flying insects as prey that they seldom land during the day. They make their living by catching bugs on the wing. In addition to species we connect with flying insects, (flycatchers, swallows, a few of the warblers, and night hawks), most of the songbirds feed largely on insects. Woodpeckers, of course, but also some of our raptors, like the American Kestrel, make insects a significant part of their diet. Although hummingbirds are known for their nectar consumption, they also need protein, and gnats and small spiders are the mainstay of the young hummingbird's diet. Even our 'feeder birds,' the chickadees, titmice, sparrows and finches that are primarily seed-eaters, feed insects to their young.

Some reptiles and amphibians are also fond of insects for lunch.

Frogs and toads are physiologically designed specifically to snag flies and other insects passing by, and turtles would never turn down a nice bit of beetle larvae or a cricket or two.

In addition to the bats, there are other mammals that are willing to feed low on the food chain. Skunks are omnivores, but along with the rest of their diet they are great at eating grubs, beetles and caterpillars. Shrews and moles actually choose to eat insects, and even larger mammals like foxes will take insects when they are available.

Insects are so widely persecuted that even other insects will feed on them. Praying mantises prey on moths, crickets, grasshoppers, and each other! Lady Bugs feed on aphids. There is a whole industry growing up around beneficial insects that control other, more pesty species, but mantids and ladybugs are probably the best-known in the non-agricultural market.

Insects can be pests, certainly, when we want to take a walk in the evening, or live unmolested in the woods, but they are critical to our survival, too. They pollinate plants, fertilize the soil, and provide food sources for thousands of other animals, all things that are essential to our well-being. So, maybe it will help to consider this wider view of nature the next time you are bitten by a mosquito, or find a cockroach in the pantry: as annoying as they are, we really do need them. And Nature is very good at finding ways to keep it all in balance.

FAMILY PROGRAMS

NIGHT HIKES

Second Saturday of each month; pre-registration required

Cost: \$10.00/adult; \$5.00/child 17 or under

August 9 (7 – 9)

Bats, Bugs and Black Lights

Explore the refuge in the twilight hours to find local bats and their prey. With the help of black lights, we can lure moths and other insects, and maybe glimpse a few 'shooting stars' once the sun fully sets.

September 13 (6:30 – 8:30)

Summer's End

Summer is coming to an end, and things are changing in the woods. Did you know that most bird species migrate at night? Join our Naturalist in search of some early migrating birds.

October 11 (6:00-8:00)

Tricksters of the Night

October is the month for trick-or-treaters, and even animals like to play tricks. Some are sneaky, while others are good at hide-and-seek. With the help of our Naturalist, see what tricksters you can find in the night.

WALK ON THE WILD SIDE

The third Sunday of each month, join our Naturalist in search of the wild at Woodford Cedar Run. Meet at the Education Center at 1:30 p.m. for a guided hike. Cost: included with admission.

August 17

Wetland Wonders

Wetlands are home to many unusual flora and fauna. Plants that eat bugs and bugs that can eat frogs are but two of the amazing things found in the wetlands. Please dress for mud!

September 21

Canines of the Pines

Did you know that there is more than one kind of fox in the Pines? Ever wonder what other animals are related to dogs? Hike our trails and search for signs of our other canine inhabitants.

October 19

Fall Frolic

In the fall, plants and animals get ready for the coming winter. Leaves change color, and animals lose their summer coats. Join our Naturalist on a hike to examine the changes taking place on the Refuge.

KNEE HIGH NATURALISTS

Second Wednesday of each month from September to December from 10:00 to 11:30 a.m. Discover nature with your 3 – 5 year old child through age-appropriate games, stories, crafts, skits, songs and hikes. Sign up for one session or the whole series by calling (856)983-3329 ext. 1.

Cost: \$8.00/child w/adult; preregistration required.

September

Terrific Trees

Look at leaves, bark, nuts, smell, and color of different trees, and find out who might live in each of them.

October

Let's Go Batty

Discover some of the secrets of bats – where they live, what they eat, and how they are different from other mammals.

November

Give A Hoot for Owls

Find out where owls live, what they eat, how they see, and which ones live around here.

December

Where Do the Animals Go?

Explore what animals do in winter: hibernate? migrate south? grow heavy new coats? stay active?

ECO CLUB

Second Saturday of each month from 10:00 a.m. to 12 noon. See the following article for details.

In recognition of the interest of children in nature and wildlife, we started an Eco Club to offer a place for youngsters to give their time and talent before they were old enough to volunteer with the animals. We are pleased with the level of participation, but have come to realize that there are two distinct needs that we can meet for kids. To answer both the service side, and the learning side, we are planning to offer two separate opportunities beginning in September.

The Eco Club will continue, but there will be no service projects involved. Instead, members will be taken into the Refuge one day a month to learn about the plants, animals and features of the Pine Barrens. There will be dues for club membership, paid either on a monthly or annual basis (\$5.00/month or \$45.00/year). Membership will include access to a biological database they will be building, nature activities and/or crafts, an Eco-Club T-shirt, and an e-newsletter.

In addition, we will begin offering service projects for children who need or want to volunteer their time 'In Service of Nature.' We recognize that many religious, educational and secular groups now require their members to volunteer with charitable causes. We will offer service projects that average 4 – 10 hours each, and can be done over several days, or in some cases, several months, depending on the project. Some may be independent study, but most will involve a group of participants.

To register for either EcoClub or In Service of Nature, call 856-983-9702 or email us at info@cedarrun.org.

Photo by Val Pullen

Special Events

Home School Day at Cedar Run

September 18th

'Hunters of the Sky' our popular program featuring birds of prey will be given on our first Home School Day (September 18) in the amphitheater from 11:00 a.m. to noon. This is a good way to get to know the Refuge, and a wonderful introduction to our new Home School 'curriculum.' Students (with a parent) are invited to spend the rest of the day exploring the Refuge. We have some prepared activities to help you make the most of your explorations.

Pack a lunch, and dress for the weather. Cost is \$8.00/person; pre-registration is required.

Girl Scout Junior Birders

October 4th

Come to the Refuge on October 4th for Girl Scout Junior Birder Day. We will present our 'Hunters of the Sky' program in the amphitheater at 10:30 a.m., then send the blossoming birders off to various stations on the Refuge for 5 different activities that will qualify them to take home a Junior Birder patch. The activities will focus on feeder birds, bird identification, the physiology of beaks, migration flyways, and protecting birds in your back yard.

Pack a lunch, and dress for the weather. The cost of the event is \$8.00 per scout; two leaders are admitted free of charge (pre-registration is required). The program is designed for Brownies and Juniors.

Pinelands Plant Sale

On September 20th Woodford Cedar Run Wildlife Refuge will host the first-ever Pinelands-Friendly Yard and Garden Fair sponsored by the Pinelands Commission.

Come to the Refuge between 11:00 a.m. and 4:00 p.m. for nature walks and educational tours; design ideas for your yard; insight on the selection, planting and maintenance of native plants; and to purchase plants from a number of nurseries that will be exhibiting native plants here.

Mike McGrath, host of WHY radio show 'You Bet your Garden' will be a featured speaker at the event.

For details log onto the Pinelands Commission website at www.nj.gov/pinelands.

Photo by Toni Moore

Save the Date!

Autumn with the Animals

Saturday, November 1, 1-5 pm

Admission: \$5 per person

Have a WILD time with live animal shows, moon-bounces, rides, games, crafts & activities, food and entertainment.

Lost? Call (856) 983-3329 for directions.
